

Welcome to  
***our world***

STALLERGENES  GREER™  
Life beyond allergy

# Making *allergy* *history...*

*A new biopharmaceutical company is integrating over 1400 hearts and minds to unite in one purpose. To make allergy history.*

We're bringing together the best of what we do - and that's reflected in our new identity. We're combining our great heritage and enviable reputations for quality and innovation. And we're driven by the spark in our people that helps us progress towards a cure for allergy.

## ...not a claim

*An opportunity*  
*An aspiration*  
*An objective*

As the new Stallergenes Greer we have a remarkable story to tell. About how we're innovators and leaders in immunotherapy. About how we're a truly global business. And about how as a single business we have the opportunity to change the way people think about allergy.

*We aim to consign allergy to history. And we aim to make history by doing so.*

*That's not just a claim...*

*We're making it a reality.*

## This is **our vision**

To shape the future to help people  
live their life beyond allergy

# We passionately believe that **everyone has the right to live a normal life**

**Other pharma companies  
focus on relieving the  
symptoms – and most  
allergy sufferers think  
that's all that can  
be done.**

We develop allergy Immunotherapy  
treatments that induce tolerance to  
allergens by rebalancing the  
immune system<sup>1</sup>.

Today this immunotherapy approach is  
not widely used. We want to change  
that. Because changing how we treat  
allergy will improve the lives of people  
globally. It will prove a strong foundation  
for treating more allergies than ever  
before. That vision will be the path to  
our success.

We are  
**different.**

# This is our *purpose*

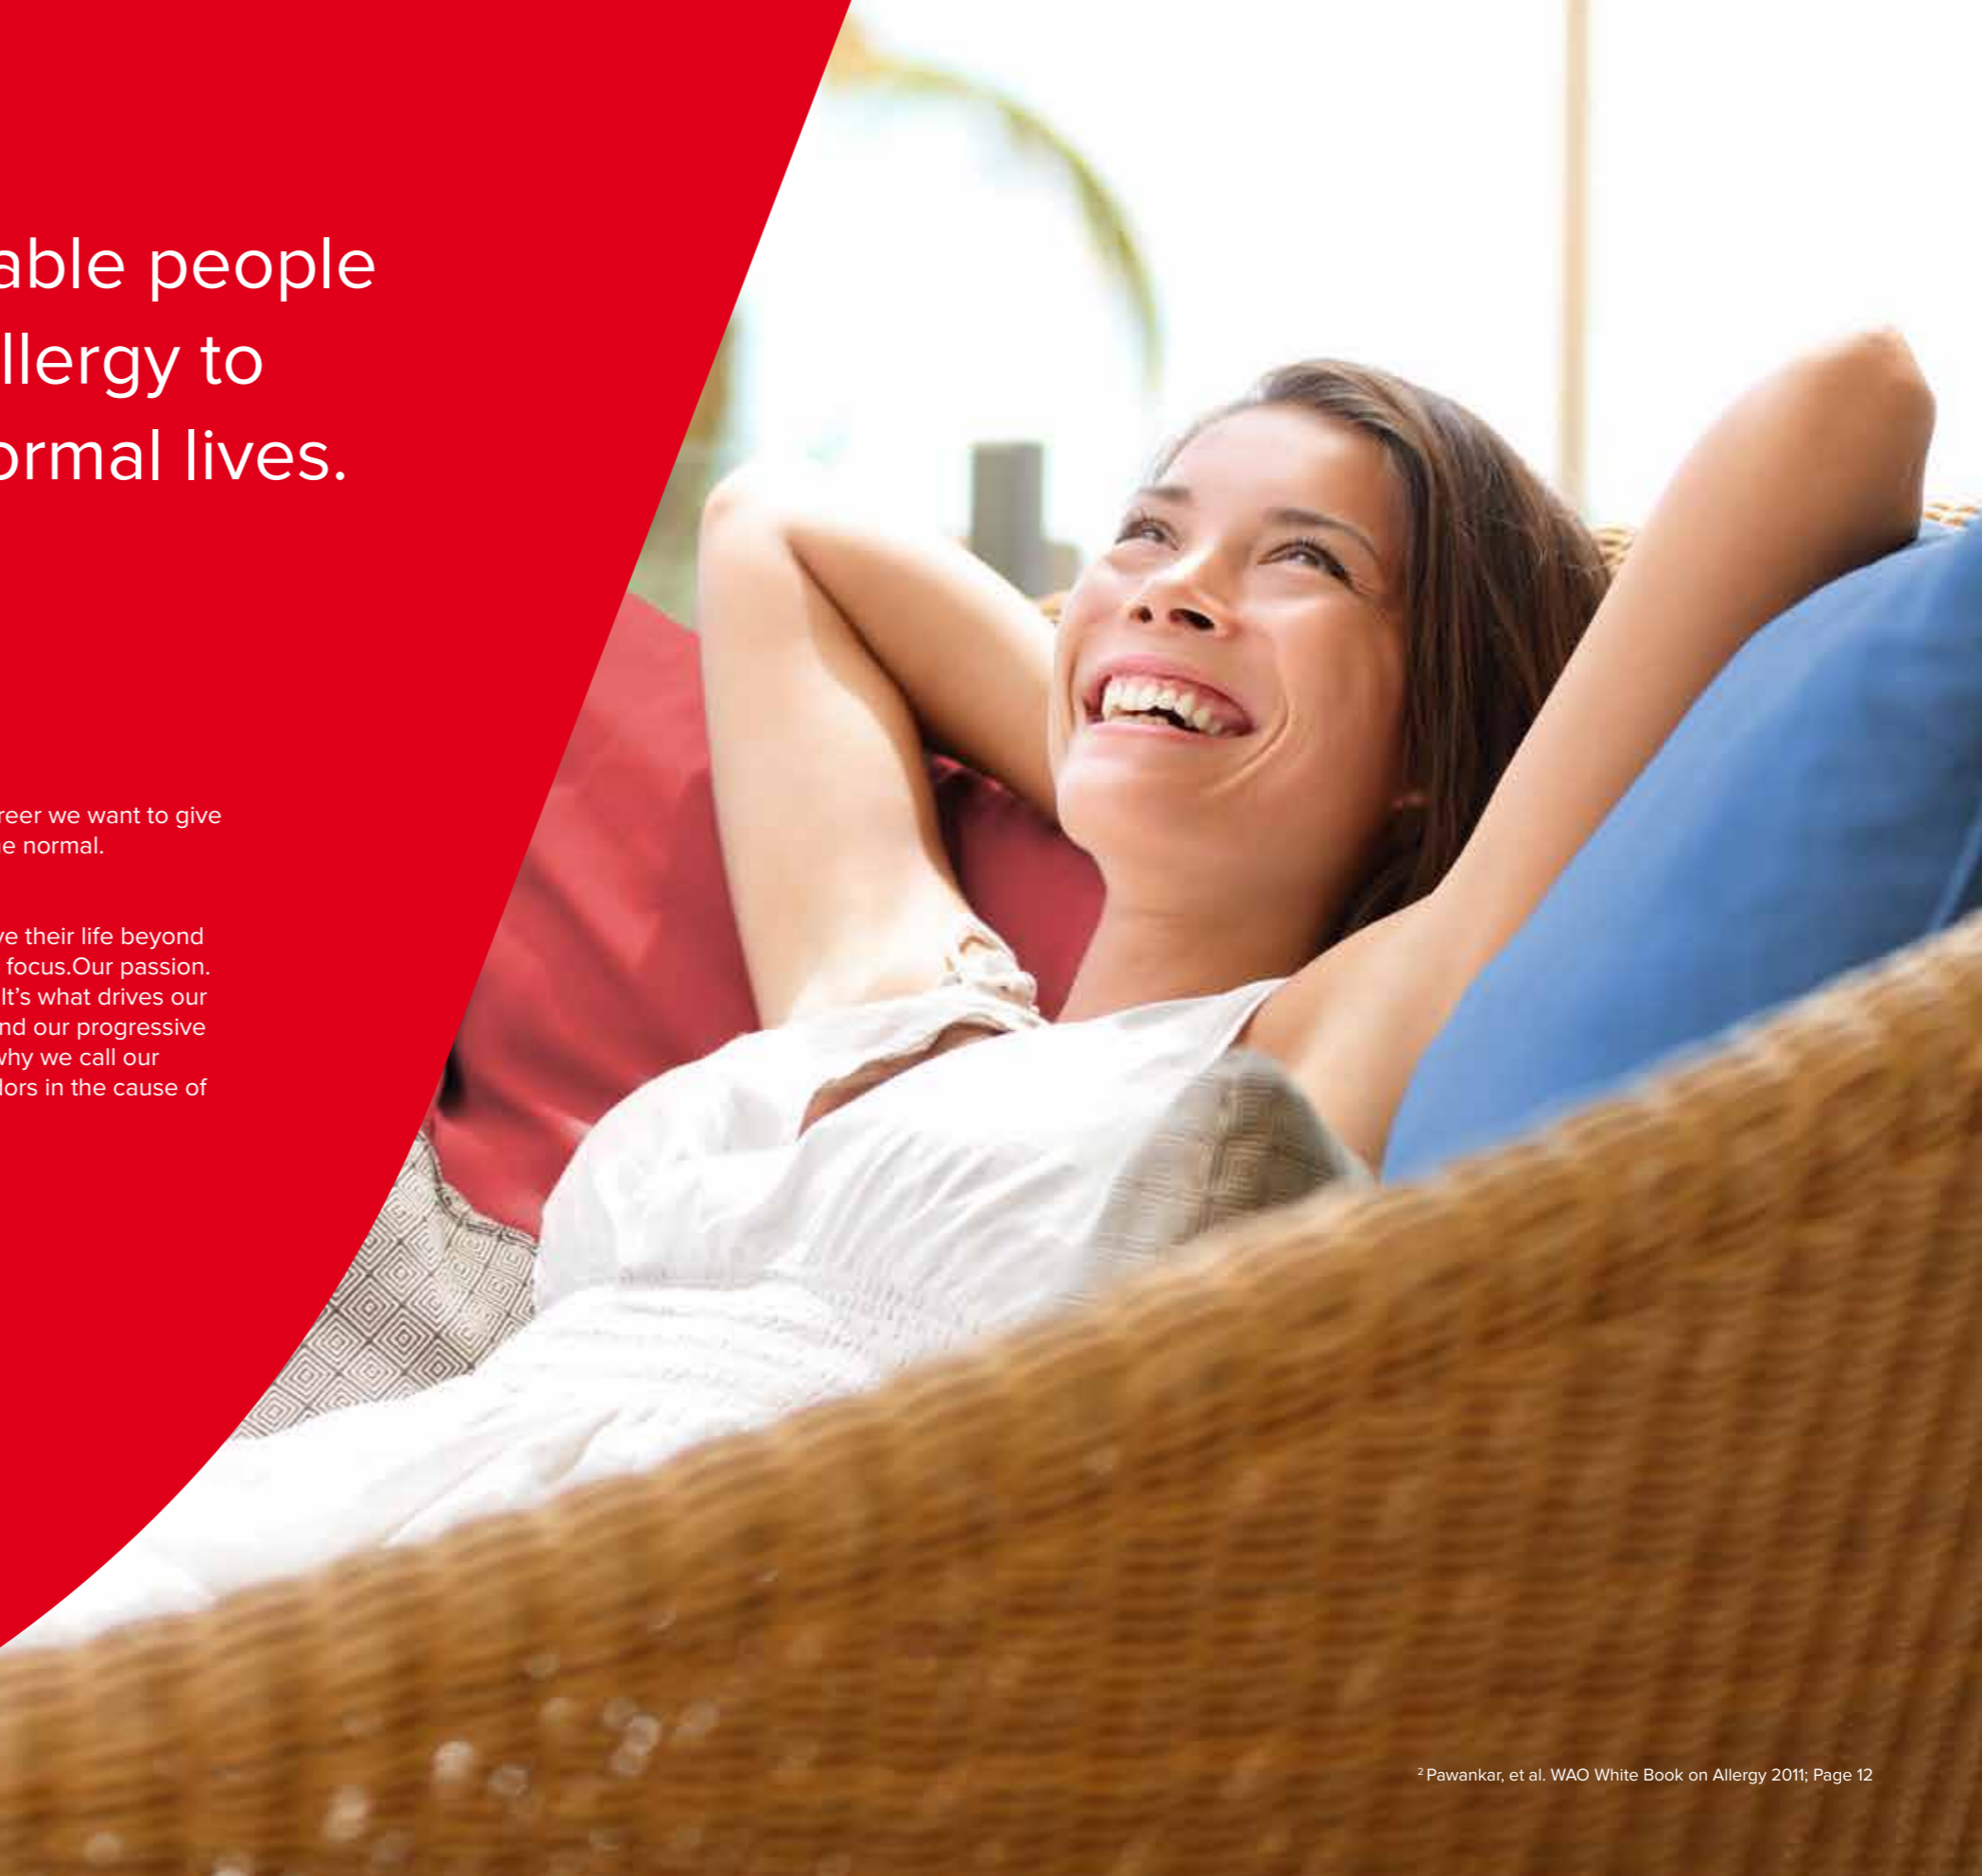

To enable people  
with allergy to  
live normal lives.

Passionate people.  
*Enabling science.*

*What is normal? It's  
having the freedom to go  
where we want and do  
what we want without  
fear. But for 1 in 3<sup>2</sup> people  
allergy puts boundaries  
on life.*

At Stallergenes Greer we want to give  
everyone the same normal.  
*Without limits.*

Helping people live their life beyond  
allergy is our total focus. Our passion.  
Our commitment. It's what drives our  
talented people and our progressive  
science. And it's why we call our  
people Ambassadors in the cause of  
allergy treatment.

Sarah, from the source  
material department,

*was always passionate  
about understanding how  
nature works. Watching  
and learning.*

Today Sarah focuses her passion  
on sourcing high-quality allergens to  
make the best quality medicines.

***That's what makes a  
Stallergenes Greer Ambassador.***

*Inside every one of us is a spark.  
It ignited in childhood and its light  
has been driving us to become the  
people we are today.*

For Sarah it was a passion about watching how nature works. Today she and her team are growing and sourcing the best-quality allergens that create the vaccines to stop allergy in its tracks.

All our employees are Stallergenes Greer Ambassadors. They each have a unique story to tell about how their passion brought them to the role they play in freeing people from allergies.

# Driving change *Changing lives*

How do we deliver on our purpose?  
***It takes dedication. It takes talent.***

***But it's more than that. It's having the courage to be pioneers. To champion ground breaking innovations.***

***As a company and as individuals we embrace that responsibility to lead the way, because it's only through discovery that we make progress.***

We're driven by real and tangible passion – putting people, science and progress at the heart of all we do. That's why we remember that we treat human beings rather than a collection of symptoms. We are transparent in all our communications and we stand by our code of conduct.

We connect closely with our patients and our partners. We deliver personalized medicines to homes and patients constantly through our regional customer centers. We work together with healthcare professionals to drive improvement, not just once but continuously.

We listen. Then we feed back what we hear into our products and the way we work. To make better science, driving change and changing lives.

# This is our *ambition*

To change the treatment paradigm of allergy therapies by delivering life-changing medicine and innovative patient tools.

Thinking about  
*allergy differently.*

*Progressive thinking means going beyond treating allergies. It's about helping people live richer lives. Full of wonderful rewarding experiences.*

Our flexibility and commitment to progress enable us to take a paradigm step away from conventional approaches to create evidence-based, personalized medicine.

At the same time we want to shape the conversation with physicians to help them help their patients. That's why we will evolve beyond drugs therapy to offer total healthcare solutions that encompass tools, advice and support.

# Life *beyond* allergy

Those three words  
*encapsulate our intentions.*

They show that we are passionate innovators who are changing the way that science improves people's lives. We're leading – not following.

***Our flexibility and commitment mean we're ideally placed to take that step towards life-changing medicines.***

We recognize that you as customers and partners need to believe. We prove our expertise through success, we build relationships with you through listening, and we demonstrate reliability through quality.

And we are primed for growth – but always keeping your needs in mind.

This is why we can say with confidence that we are not making an unbelievable claim. There is a real opportunity. For Stallergenes Greer it is a realizable aspiration and it's our completely focused objective. ***Together we will make allergy history.***
